

Neumann College Selects Hitachi StarBoards As A Valuable Tool To Further Higher Education -- Neumann College Utilizes Hitachi StarBoards for Professor and Student Education. --

Aston, Pennsylvania –

Hitachi has been chosen to provide StarBoard FXDUO-77 interactive whiteboards for Neumann College in Aston, Pennsylvania. They are being used in conjunction with the award winning Hitachi CP-A100 3LCD projectors as part of the Hitachi CP-A100+FX DUO bundle.

Neumann understands the value of the StarBoard as an educational tool and has worked to ensure that both professors and students can utilize and benefit from the technology. "The boards are being used for programs to educate professors on course management software in addition to integrating them into normal classes that take place in the labs," stated Dan Smith, Media Specialist at Neumann College.

"We are particularly impressed with its ease of use. Other boards we've had in the past required some type of tool to perform the interaction. With the Hitachi StarBoard the ability to just use your finger makes it extremely easy to use."

Having such a high level of success with the Hitachi FXDUO-77 has made it an easy decision for Neumann College to consider Hitachi for future technology needs.

"There is no doubt we would look to Hitachi in the future if we were to add additional interactive whiteboards. The StarBoard is a wonderful and productive tool that has been a great addition to the learning environment."

"The StarBoard was a great investment because it gives us capabilities to do things we were never able to do before!" Neumann College now has the capability to give presentations to large groups of individuals using the Hitachi Starboards and award winning 3LCD projectors.
